

Bifuran

- Kills **gram negative bacteria only** - so nitrifiers (Filter) are not affected
- Turns the water an awful yellow - hard to remove even with WC's
- Can be used at **any temperature**

Bifuran

Bifuran is a mixture of Nitrofurazone (80%) and Furazolidone (20%). Bifuran possesses bacteriostatic, bacteriocidal and antimicrobial properties useful for treating and controlling bacterial and sporozoonan diseases. It is indicated for the control of *Aeromonas* spp., *Vibrio* spp., and other bacterial pathogens. Bifuran treats external diseases AND internal (systemic) diseases. It can be used as a bath (or dip), a total pond treatment or it can be given orally. It is very effective for controlling ulcers, fin rot, mouth rot and tail rot. Bifuran is a very effective total pond treatment.

Bifuran is a very cost effective treatment for koi and goldfish. When used as a total pond treatment, 100 grams treats 1,000 gallons. 1 kilo (2.2 lbs.) treats 10,000 gallons. As a dip, it is dosed at 100mg/gallon
