

AQUADYNE COMPUTER CORPORATION

established 1993

Established in 1993, Aquadyne Computer Corporation was formed to develop, market and support the next generation of low-cost, multi-parameter water quality monitoring, alarming and control devices. Today our products are used by many prestigious public aquariums, Fortune 500 companies, entertainment parks, research facilities, and pet store retailers world-wide. In every application, our goal is to offer our customers a cost-effective solution to monitor, analyze, and control water quality with the capability for networking and remote data acquisition.

We are pleased to continue to be able to provide quality products for end-users, maintenance service providers and OEMs alike.

Products designed by Aquadyne include:

Octopus™ 2000

Octopus™ 3000

Octopus™ 4000 - RELEASE DATE APRIL 11, 2005 see enclosed *Product Info Sheet*

Aquaguard

Aquanode ES & XL series

AquaWeb software

From design, production and support Aquadyne Computer Corporation continues its leadership in water quality management.

Thank you for your interest in our products. Please feel free to contact us with any questions regarding our products or any design needs you may have.
